Attention: To whom it my concern

Dear Sir/Madam,

### **Compatibility testing of stemming/tamping foam**

BME tested Rock Filla stemming/tamping foam by Sibambene mining supplies for reactivity with INNOVEX™100. No reaction was observed when the stemming material was tested. The stemming material is found to be inert in that it does not react chemically with the explosives systems in the blast hole. Therefore, it is deemed safe to be used as stemming material.

This letter can be used in conjunction with mine risk assessments which must be carried out as per the Mine Health and Safety Act No 29 of 1996, regulation 4.14(1).
